

Project Information

Project History

The GRTC Pulse has been a part of Richmond for more than 10 years. The timeline below outlines the history of the GRTC Pulse Bus Rapid Transit, and the steps that brought us here today.

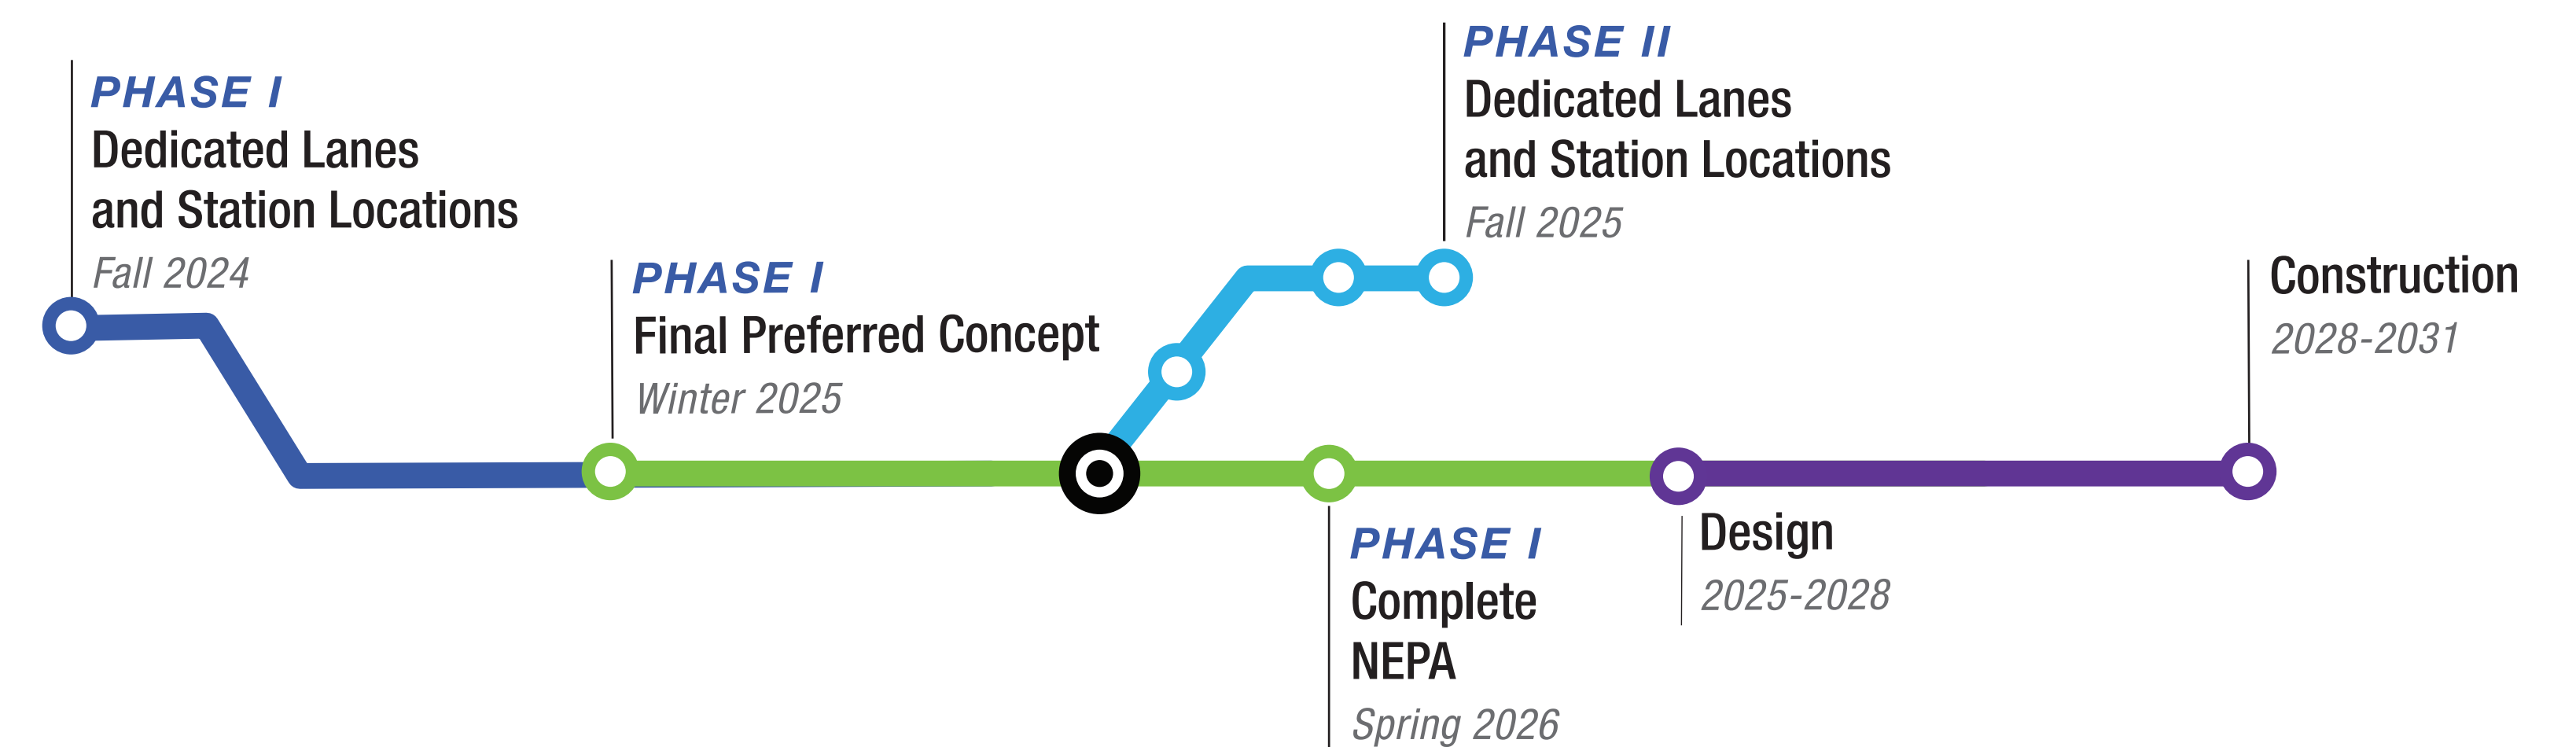

Project Overview

In Fall 2023, GRTC completed the GRTC Pulse North-South Bus Rapid Transit (BRT) Study to determine a preferred corridor alignment for a North-South BRT line. The study paired public input with demographics, employment, equity, multimodal, connectivity, and existing transit service. A preferred corridor alignment was selected by GRTC for further design and environmental review.

This project picks up where the 2023 study left off. GRTC Pulse North-South BRT will be constructed in phases. This project will advance Phase I of the locally preferred alternative through conceptual design and the federally-required environmental evaluation process. It will also advance conceptual planning of the segments identified as future phases of the alignment. When this project concludes, Phase I will be eligible to compete for federal funding for detailed design and construction.
